

# ADVANCED IT TRAINING

Fast Lane Consulting and Education Services, Inc. conducts public and private training on today's leading technologies. From Cisco and NetApp to IBM, VMware and others, Fast Lane offers the highest quality training on the technology that runs your business.

Fast Lane's Vendor-Certified Instructors deliver leading-edge, Authorized Vendor courses that will prepare your IT staff for the real-world situations they will face when back on the job. This classroom to job transition requires instructors who go above and beyond the course materials and learning labs to create an educational environment that caters to the unique needs of each student.

Because no two businesses are alike, Fast Lane also offers customized training across multiple technologies. Our trained Account Representatives will work with you to create a unique program designed to address the specific requirements of your network. This personal level of training, whether at your location or ours, allows colleagues and instructors to collaborate in an open learning environment that creates results. The extensive lab exercises simulate the real-world technical issues your employees face each day.

When you partner with Fast Lane, you partner with a global leader in technology training. Founded in 1996, Fast Lane has grown swiftly to become NetApp's only Authorized Learning Partner to operate on a worldwide level and Cisco's only Learning Solutions Partner training in all eight theaters. This commitment to excellence in training extends beyond the classroom and into every aspect of our business. Students leave our classroom ready to face the challenges ahead.

***Experience the difference training in the "fast lane" can make for your IT department.***
