Cloud Applications

The movement of applications into the cloud introduces concerns for IT managers about the compatibility, interoperability and performance experience for end users. Specialized training programs help ensure your teams have the knowledge and skills in conjunction with the IT management teams that are supporting the latest technologies. Fast Lane delivers both skills and certification-based programs designed to optimize your productivity and your ROI. You will be able to operationalize and transform your business after taking a Fast Lane course to use:

- Cloudera Enterprise
- Microsoft SQL Server
- Microsoft Exchange Server
- Microsoft Sharepoint
- Microsoft Active Directory

Desktop and Application Virtualization

Mobile desktops and virtualized applications are two of the most important enterprise services delivered by the private cloud. A Bring Your Own Device (BYOD) world enables mobile devices such as smart phones and tablet computers to create IT management issues when you need explicit control over how your data is being secured as it travels across the cloud. Fast Lane's training covers the wide range of virtual desktop architectures and deployment models. Our training portfolio spans the Virtual Desktop Infrastructure (VDI) and individual (and groups of) applications delivered as a remote desktop service.

- Virtual Desktop Infrastructure (VDI)
  - VMware Horizon Suite
    - VMware Horizon VIEW
    - VMware Horizon Mirage
    - VMware Horizon Workspace
  - Citrix XenDesktop
- Remote Desktop Services
  - VMware ThinApp
  - Citrix XenApp
  - Microsoft App-V

Fast Lane Cloud Computing

Software-Defined Data Center

The Software-Defined Data Center (SDDC) provides a pathway to optimize applications and converged infrastructure services across computing, storage, networking, and security. The aggregation of pooled IT resources requires a effective management platform to handle the provisioning, operation, and operational management of virtual Data Centers (vDC). Fast Lane possesses a strong portfolio of multi-vendor training and architecture based solution training to manage your business.
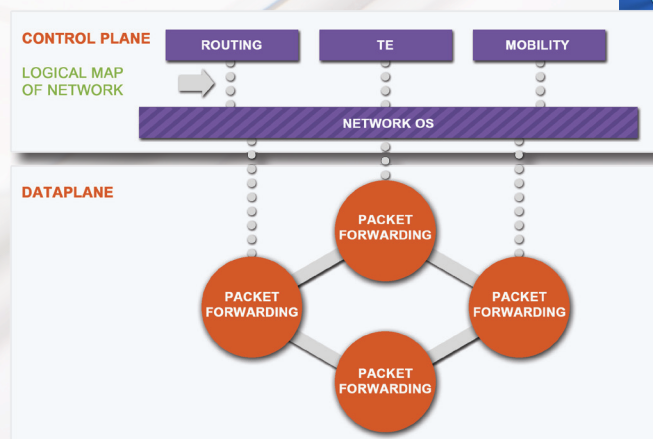

- FlexPod Converged Infrastructure Architecture
- Cloud Platform Management
  - VMware vCloud Automation Center (vCAC)
  - Cisco UCS Director
- Cloud Hypervisor
  - Citrix XenServer
  - Microsoft Hyper-V
  - VMware vSphere

Software-Defined Networking

The Software-Defined Network (SDN) represents a logical evolution of the Software Defined Data Center to provide IT and network administrators an effective management layer. Any cloud management services must be able to control and manage both the virtual network services and the physical network services. Deploying cloud applications rapidly requires the ability to re-configure network services such as security policy, load balancing and firewall services. The Fast Lane SDN curriculum helps ensure that you have the necessary skills to realize the key benefits of SDN in your environment.

- Cisco Application Centric Infrastructure (ACI)
- Cisco UCS
- Cisco Nexus
- Citrix NetScaler
- VMware NSX
